

IN THE SPECIFICATION:

Page 7, paragraph 3, is amended as follows:

In the first embodiment of the invention shown in FIGS. 1-11, flexible arm 60 and cam pin projection 64 are stamped and formed out of side wall plate 40 of metal shell 14. ~~FIG. 9~~ FIG. 14 shows still another embodiment of the invention wherein flexible arm 60 and cam pin projection 64 are stamped and formed out of top cover plate 38 of the metal shell. Of course, the cam slot in cam slider 50 must be disposed on top of the slider, rather than at a side of the slider as in the first embodiment. As with all of the embodiments, the cam pin projection is integral with or fixed to the flexible arm so that it cannot become dislodged therefrom during assembly or use of the connector.
